k.eii's POC:

Firstly, scan the processes, notice there are 2 programs running (notepad and MS paint). I intendedly add MS paint as a decoy, the main objective is in the notepad using vol notepad plugin, notice that it contains docker

```

from the dockerfile readed by notepad try to look for the files "MyProject"

when searching for it, found '25fqjks81ce9sowwz0x9u1ouj' folder, dump the files from it (disk.enc and key.bin)

```
jons@01-20-jonathans:~/tools/volatility3
$ sudo python3 vol.py -f memory.dmp windows.filescan | grep "MyProject"
0x8a8ebdf9e9b0 0\Users\Doli\Documents\data\25fqjks81ce9sowwz0x9u1ouj\diff\app\MyProject\disk.enc 216
0x8a8ebef7b7a0 \Users\Doli\Documents\data\25fqjks81ce9sowwz0x9u1ouj\diff\app\MyProject 216
0x8a8ebef7c100 \Users\Doli\Documents\data\25fqjks81ce9sowwz0x9u1ouj\diff\app\MyProject 216
0x8a8ebf525460 \Users\Doli\Documents\data\25fqjks81ce9sowwz0x9u1ouj\diff\app\MyProject\key.bin 216
```

1. analyze the key.bin's length (64 byte), it was encrypted using 256 bit aes.

```
2. openssl enc -d -aes-256-cbc -in disk.enc -out decrypted -pass file:./key.bin
```

```

7. flag is found as png

## Trashbag [QUALS]

just use grep, the flag used is png and then you just need to combine the hexes

```
(jons@01-20-jonathans)~[/gudangchall/Meta4Sec/trashbag]
$ grep -r "PNG" trashbag
grep: trashbag/B3JmSUwPES/B3JmSUwPES: binary file matches

(jons@01-20-jonathans)~[/gudangchall/Meta4Sec/trashbag]
$ grep -r "IDAT" trashbag
grep: trashbag/B3JmSUwPES/B3JmSUwPES: binary file matches
grep: trashbag/JLRCWmPe1E/JLRCWmPe1E: binary file matches
grep: trashbag/02lzPyiGZd/02lzPyiGZd: binary file matches
```

## FLE [FINAL]

EOF of an ELF is marked with 16 bytes that start with 01 ended with 01 and being continued with 15 null bytes

Offset(h)	00	01	02	03	04	05	06	07	08	09	0A	0B	0C	0D	0E	0F	Decoded text

000039F0	00	00	00	00	00	00	00	00	00	00	00	00	00	00	00	00	.....

ELF file header, before entering the GLIBC setting will be marked with 16 bytes that contains 01 and 22. after that will be continued with null bytes and then entering the memory mapping of the ELF

Here, I just swap the position of the ELF file header under the EOF and then move the chunk of the EOF after the ELF file header. It is supposed to be easy.

if you have successfully recovered the ELF, you just need to run it and the flag will be printed out.

the flag is written in Octal, you can use [cyberchef/dcode.fr](https://cyberchef.org/dcode.fr)
